

**NAME**

B::Assembler - Assemble Perl bytecode

**SYNOPSIS**

```
use B::Assembler qw(newasm endasm assemble);
newasm(\&printsub); # sets up for assembly
assemble($buf); # assembles one line
endasm(); # closes down

use B::Assembler qw(assemble_fh);
assemble_fh($fh, \&printsub); # assemble everything in $fh
```

**DESCRIPTION**

See *ext/B/B/Assembler.pm*.
