# NAME

ExtUtils::MM_Win95 - method to customize MakeMaker for Win9X

# SYNOPSIS

```
You should not be using this module directly.
```

# DESCRIPTION

This is a subclass of ExtUtils::MM_Win32 containing changes necessary to get MakeMaker playing nice with command.com and other Win9Xisms.

## Overriden methods

Most of these make up for limitations in the Win9x command shell. Namely the lack of && and that a chdir is global, so you have to chdir back at the end.

dist_test

&& and chdir problem.

subdir_x

&& and chdir problem.

Also, dmake has an odd way of making a command series silent.

xs_c

The && problem.

xs_cpp

The && problem

xs_o

The && problem.

clean_subdirs_target

&& and chdir problem.

realclean_subdirs_target

&& and chdir problem.

os_flavor

Win95 and Win98 and WinME are collectively Win9x and Win32

# AUTHOR

Code originally inside MM_Win32. Original author unknown.
